

Pain free SharePoint Deployments

Let us take the headaches out of deploying SharePoint.

SharePoint is a complex platform and if you get the deployment wrong your organisation may never see the true value of the platform. Get it right and you will get an instant return on your investment.

What is a SharePoint Deployment?

This is the installation, configuration, integration and site creation associated with a SharePoint Server environment. SharePoint deployments can be undertaken on your physical servers, virtual servers (hosted in a datacentre or from the Cloud, such as with Microsoft Azure).

Why customers use our SharePoint Deployment Services

- Peace of mind from using a specialist Microsoft Gold Partner
- Included as part of a SharePoint Development or Migration project
- Track record and client base
- No need to train internal staff for a one-off project
- Availability of internal resources

Fixed Price Project

- **Fully scoped project proposal for your deployment**
- Managed by PRINCE 2 accredited Project Manager
- Stand alone or part of a wider development project

Easier to budget for and know the job will get done!

Wealth of Experience

- **Successfully completed all types of deployment**
- We know the pitfalls and how to overcome them
- Client references available for all types of deployment

Well planned, fast and cost effective deployments

SharePoint Certified Staff

- **Gold Collaboration and Content Partner**
- Deployed SharePoint on Physical, Virtual and IaaS
- Over 12 years experience deploying SharePoint

No internal SharePoint skills or experience required

Adepteq deployed a new SharePoint environment and migrated data from another organisations SharePoint as part of a services buyout. Completed to a tight timescale, overcoming several obstacles and a great bridge between the organisations.

- Simon Hurley, Project Manager, Cygnet Healthcare
